Chaos erupts across Spain as protesters clash with police during massive nationwide strike – End Time Headlines – Nov. 12, 2026

Excerpt: According to a report from Fox News, unruly protesters set fires, smashed storefronts and launched fireworks at riot police across parts of Spain on Wednesday as a massive nationwide strike over soaring housing costs disrupted transportation and businesses.

Violent scenes unfolded in Barcelona, where some demonstrators vandalized stores along the city's popular Paseo de Gracia shopping boulevard, set small bonfires and launched fireworks at officers arriving in riot gear and armored vehicles, according to The Associated Press.

The violence erupted after a largely peaceful march as Spain experienced its first general strike in 14 years, with workers demanding relief from skyrocketing rents and the rising cost of living.

Housing activists claimed 400,000 people marched through Barcelona, while city officials estimated attendance at 55,000. Government officials reported another 120,000 demonstrators gathered in Madrid despite heavy rain, the AP reported.

The nationwide walkout disrupted public transportation, forced some businesses to close and blocked major roads. Police made arrests across the country, while officers used pepper spray against demonstrators in Madrid, according to the AP. The unrest comes amid growing frustration over Spain's housing crisis, fueled in part by the eviction of an 87-year-old Madrid woman who had lived in her apartment for seven decades before reportedly facing a tripling of her rent. She died weeks later, according to the BBC.

America's Emergency Alert System To Be Tested Next Week – End Time Headlines – Nov. 11, 2026

Excerpt: According to a report from Newsweek, the Federal Communications Commission and the Federal Emergency Management Agency have announced a nationwide test of the Emergency Alert System next week, a measure expected to reach millions of Americans. The drill will examine the readiness of systems designed to deliver rapid public warnings during major crises.

FEMA's Integrated Public Alert and Warning System, or IPAWS, is built to transmit alerts across televisions, radios, and other devices throughout the country. Officials have set the next national test for November 17 at 2:20 p.m. Eastern time.

The broadcast will interrupt programming on television and radio stations, with the agency stating that "the interruption is expected to last about one minute." Cellphones will remain unaffected. Such tests are required at least once every three years.

Dollar's decline about to speed up, with Asia's foot on the pedal

– Asia Times - by Nigel Green - November 10, 2026

Excerpt: Dollar index fell on midterm results but steady and widening diversification among Asia's central banks and traders is the trend to watch

The US dollar just isn't as desirable as it used to be. Image: X Screengrab

Washington has spent the past week arguing over what the Democratic sweep of Congress means for the next two years. But few have debated what it means for the dollar.

Democrats took majorities in both the Senate and the House, setting up gridlock for the rest of President Trump's final term. On that news, the dollar index slipped to its lowest level in over a month.

But for the dollar's long-term future, the result barely matters. The world has been quietly reducing its dependence on the US currency for a quarter of a century, and nothing decided at the ballot box last week will stop it.

Whoever controls Congress, de-dollarization has plenty of road left, and Asia is driving much of the trend.

Around the turn of the century, the dollar accounted for roughly 71% of global reserves. By the end of June this year, its share had fallen to 56.70%. These are the most cautious investors on the planet, and they've been moving steadily in one direction for 25 years.

CRIMINAL: Soldiers FORCED to Take Anthrax Vax as Punishment for Refusing COVID Shots – Exposing The Darkness - Nov. 11, 2026

Excerpt: A sadistic, tyrannical campaign of medical assault against our nation's finest. This should be ILLEGAL.

The military machine is doubling down on its persecution of those who refused the COVID jab.

We are seeing a calculated, tyrannical strategy where commanders deliberately deploy soldiers who filed exemptions to regions where the poisonous anthrax vaccine is mandatory.

It is a wicked, predatory trap designed to force submission by violently stripping away their right to bodily sovereignty.

This is not about national security, it is pure, vengeful retribution against the warriors who stood their ground.

Source: Children's Health Defense

Apparently, certain members of the military are still offended that their soldiers refused an experimental and highly dangerous vaccine.

As punishment, they are INTENTIONALLY assigning these soldiers to regions where it is "necessary" to get the anthrax vaccine, knowing they'll have their vaccine exemptions denied.

KANE: "They were given an assignment because they knew they could deny their exemption again. You've seen evidence of that?"

YOUNTS: "Yes."

This should be ILLEGAL.

TRUMP IS TOO CALM....SOMETHING IS UP, AND I THINK IT'S EO 13484! - Harry Richardson - Nov 05, 2026

Excerpt: REMEMBER WHEN WE TOLD YOU ABOUT EO 13484 BACK IN 2018?

"EO 13848 is a standing presidential directive built under the International Emergency Economic Powers Act (IEEPA) and the National Emergencies Act (NEA), declaring that foreign interference in U.S. elections constitutes an unusual and extraordinary threat to national security."

President Trump announced on July 16th, 2026, that the Communist Chinese government 'and its proxies' gained access to "as many as 220 million Americans' voter registration files through a mix of buying, stealing, or hacking," (reported by USA Today).

This number includes the estimated 212 million 'active' American voters (both legal and illegal) leaving 8 million 'ghost' registrations. In other words, the CCP got every legal--and illegal--voter registration file in America by hook, crook, and dollar.

Under the National Emergencies Act, EO 13848 remains active as long as the underlying national emergency is continued.

Despite every incentive to let Trump's election-interference framework die—Joe Biden renewed the EO 13848 national emergency in writing, through the Federal Register each year his AutoPen was in office, leaving domestic Communists (the Democrats) no way out when they're busted.

Even Sleepy Joe determined that foreign interference "continues to pose an unusual and extraordinary threat" to the United States, and those annual continuations kept EO 13848 fully active each year he occupied the White House.

Mel Gibson wrote: "They [The Trump Administration] deliberately set a trap as part of the final cleanup operation. The plan is more complicated than we can imagine, but everything is unfolding as intended. Stay calm, keep the faith, and remain patient. The mission is enormous, and the goal is to bring about a historic change in the world."

Four Flashing Warning Signs That We're Heading Towards Economic Collapse – Liberty Sentinel - Alex Newman - Nov. 13, 2026

Four warning signs ahead of 2027: an AI bubble, escalating war, historic stock-market overvaluation, and a banking collapse exposing the threat to your retirement savings. Here's how to prepare.

Friends,

I have covered financial corruption and institutional fraud for a long time. What Andrew Winnett shared with me this week on *The Sentinel Report* is different. Not just because it is alarming. Because it is specific.

Andrew Winnett is president and founder of Retirement Renegade and a Certified Financial Fiduciary. He sees four warning signs flashing simultaneously as we head into 2027.

Here they are, straight.

1. The AI boom just hit a wall.

Democrats successfully upended long-standing Republican control in major data center hot spots, winning governor races in Texas, Georgia, Nevada, Ohio, and Iowa after campaigning on data center moratoriums and strict rollbacks. Voters passed 40 out of 41 local ballot initiatives to restrict or ban data center development across 10 states.

If states successfully restrict or ban data center construction, it could trigger a structural correction — or an outright popping — of the current AI valuation bubble. Building permits and environmental approvals typically expire within one to two years if construction does not formally begin or show continuous progress.

Tech giants and AI startups are trading at premium valuations based on the expectation that future models will unlock trillions in revenue. If infrastructure slows,

the timeline to train next-generation models stretches from months into years — and investors will be forced to reprice those multiples.

China already showed us the preview. Its AI-heavy STAR50 index plunged 40% in less than four months, erasing roughly $480 billion in market capitalization. Its broader CSI 300 dropped about 20% from its June peak. If the AI market pops here, it will likely take the rest of the economy into a bear market with it.

2. The next eight weeks may be the most volatile in years.

Trump and Netanyahu both lost their elections to maintain control over their governments. On January 3rd, Democrats take control of the House and Senate. Andrew believes the next eight weeks could be the most volatile we have seen in years.

Here is why. As soon as the Democrats are in, they will restrict Trump's every move — including on Iran. If Trump wants his big finale, the window is closing fast. It is coming before January 3rd, or it is likely not coming at all.

Iran has been clear about what they will do in response. They will target Gulf refineries. That pushes oil and diesel prices up sharply, which drives inflation higher, which keeps interest rates elevated, which suppresses the economy. We are already seeing near-daily tit-for-tat strikes between U.S. and Iranian forces.

Major escalation feels like a matter of when, not if.

3. Two of the most respected market warning signals are both red.

Nobel-winning economist Robert Shiller — who successfully predicted both the dot-com bubble and the Global Financial Crisis two years before each happened — created the Shiller CAPE Ratio. The model is so accurate at identifying market bubbles that it earned him a Nobel Prize.

The cyclically adjusted price-to-earnings ratio crossed above 40 earlier this year. Historically, going back to 1900, this level has only been reached twice: December, right before the dot-com crash, and today. The CAPE Ratio is currently higher than it was during the Great Depression.

Then there is the Buffett Indicator — which measures the total value of the stock market relative to GDP. At 150%, it signals that it is expensive. Above 175%, extremely expensive. Warren Buffett himself said that as it approaches 200%, investors are "playing with fire." He wrote about it in Fortune Magazine in 2001 after the crash, saying the elevated ratio (200%) should have been a warning.

Today, the Buffett Indicator is 302%.

4. Paraguay's "Great Taking" event

The sudden collapse of Ueno Bank — Paraguay's largest digital bank — has triggered the country's deepest political and economic crisis in decades and resulted in the impeachment and arrest of President Santiago Peña.

On November 3rd, Paraguay's central bank abruptly seized Ueno Bank after discovering it had issued roughly $146 million in questionable, high-risk loans to dummy corporations linked to the bank's own controlling shareholders. The bank's actual capital had fallen to less than half the legal minimum.

Because Ueno was a massive digital-first institution, its shutdown froze the liquid assets, wages and credit cards of nearly 3 million customers overnight — effectively locking out 60% of Paraguay's adult population from their money and halting public pension distributions to tens of thousands of elderly citizens.

Paraguay's version of the FDIC has only $1.6 billion in insurance coverage. The failed bank held around $2.8 billion in deposits.

$1.2 billion will not be returned to depositors. In other words — taken.
That is not a foreign news story. That is a live demonstration of the central question in *The Retirement Reset*: when a financial institution fails, whose money is it?

I will be honest with you. When I first encountered the legal and structural questions around the "Great Taking" concept, I tried to disprove them.

I walked away with this conclusion: retirees deserve to understand this before the next crisis, not during it.

Sodom and Gomorrah Sweeps the Country: Church Silent! – News With Views - By Patti Johnson - November 13, 2026

Excerpt: West Hollywood Now Registers Throuples and Foursomes as Official Partners

In the beginning, God created them male and female. He joined one man and one woman in covenant, declaring, "Therefore a man shall leave his father and his mother and hold fast to his wife, and they shall become one flesh" (Genesis 2:24). Jesus Himself reaffirmed this design without apology or qualification (Matthew 19:4-6). That

was the standard. That was the blessing. That was the foundation of human flourishing under the Creator's authority.

Now look at where we stand.

On November 5, 2026, the city of West Hollywood, California, unanimously passed an ordinance allowing throuples, foursomes, and other multi-partner "domestic relationships" to register with the city clerk. These registered polyamorous partnerships receive limited legal protections, including hospital visitation rights and certain tenancy safeguards, while the mayor and activists celebrate the expansion of "non-traditional family structures." Attorney and activist Christina Fialho, who pushed for the measure, did not hide the trajectory. "This law is just the beginning," she told the *Los Angeles Times*, adding that it could help people "envision a future they previously considered out of reach."

Just the beginning. The words should chill every conscience still tethered to Scripture.

This is not progress. It is the logical, predictable, and accelerating collapse of the moral order that began the moment Western society decided God's clear word on sexuality and marriage was negotiable. The spiral did not start with Obergefell v. Hodges, the 2015 U.S. Supreme Court case that legalized same-sex marriage nationwide.

It started earlier with the sexual revolution's rejection of chastity, the normalization of no-fault divorce that treated lifelong covenant as disposable, the deliberate separation of sex from procreation and fidelity, and the cultural insistence that personal desire is the highest authority. Each step was sold as compassion, tolerance, and liberation. Each step moved the line further from the Creator's design.

First came the redefinition of marriage itself.

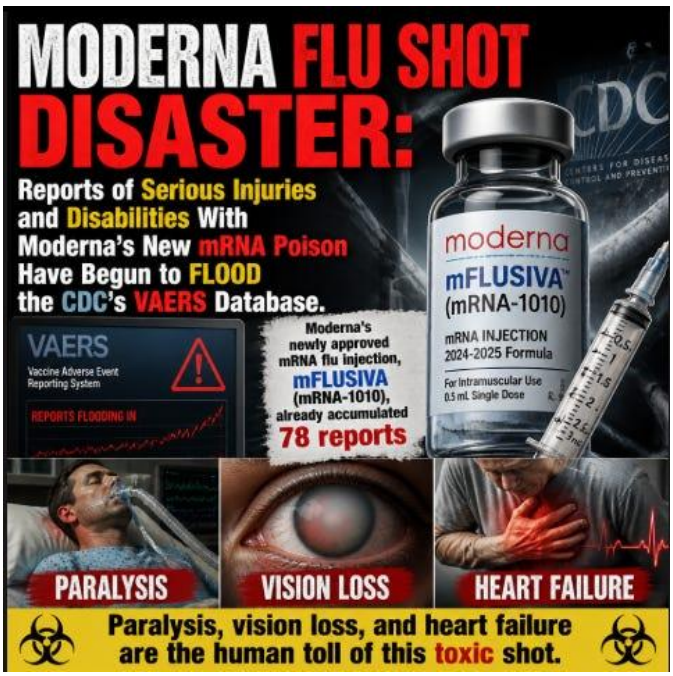

What God joined as male and female became, by judicial fiat, any two adults of any sex. Scripture's repeated and unambiguous condemnation of homosexual practice (Romans 1:26-27; 1 Corinthians 6:9-10; 1 Timothy 1:10) was dismissed as outdated bigotry. Churches that once stood firm began affirming what God calls sin, trading the fear of the Lord for the applause of the age. The "slippery slope" that was mocked as alarmism proved prophetic. Once the definition of marriage was severed from biological sex and God's created order, there remained no coherent principle to stop at two people.

Now the door is open to three, four, and beyond.

Consent is the only remaining boundary, and consent is a thin reed against human fallenness. The same logic that demanded recognition of same-sex unions now demands recognition of polyamory. The same activists who insisted that "love is love" will not stop at the number three. Fialho's own words confirm it: this is only the beginning. What follows will be the normalization of ever more inventive arrangements, the further erosion of children's need for a mother and a father, and the continued hollowing out of the very concept of covenant fidelity.

MODERNA FLU SHOT DISASTER: Reports of Serious Injuries and Disabilities With Moderna's New mRNA Poison Have Begun to FLOOD the CDC's VAERS Database – Exposing The Darkness – Nov. 12, 2026

Excerpt: Paralysis, vision loss, and heart failure are the human toll of this toxic shot.

The data is in, and it is a catastrophe.

VAERS is being overwhelmed with reports of severe injury following Moderna's new mRNA shot, a toxic poison that should never have been brought to market.

We are witnessing a wave of human destruction: sudden paralysis, blindness, cardiac arrhythmias, and emergency hospitalizations.

This comes as no surprise to those who analyzed the FDA clinical trial data, which already warned of a six-fold increase in severe reactions compared to traditional shots. Because VAERS captures less than one percent of actual adverse events, we are likely seeing only the tip of the iceberg.

This toxic shot must be pulled from the market immediately to protect our people from further disability and death.

Netanyahu orders military to prepare for a new large-scale war with Iran – Leo Hohmann – Nov. 12, 2026

Excerpt: Will the U.S. administration of Donald Trump feel obligated to re-enter the war on Israel's side if Netanyahu decides to strike Iran on his own?

Israeli Prime Minister Benjamin Netanyahu has ordered the Israeli military to get ready to launch strikes on Iran, local media reported on Wednesday night.

Despite no backing (at least not in public) from the United States, the Jordanian media outlet *Al Bawaba* reports that Israel's security cabinet, chaired by Netanyahu, is considering restarting the war with Iran. In response to reports, Tehran threatened that it would expand the war beyond the region if Israel launched new strikes.

U.S. retired Col. Douglas MacGregor also reported the war preparations on his X account.

Hamas Destroys Gaza For Money, International Sympathy and So Israel Can Get the Blame – Gatestone Institute - by Khaled Abu Toameh - November 12, 2026 at 5:00 am

Excerpt:

- **Even Palestinians are publicly accusing the terrorist group of obstructing efforts to help Gaza's population.**
- **"Palestinian Authority employees inside Gaza have reported that professionals from the Ministries of Public Works and Relief Affairs were intimidated, summoned, and coerced by Hamas into signing pledges not to undertake humanitarian projects without the group's approval. According to their accounts, those who defied Hamas risked so-called 'field justice,' including beatings and worse." — Ahmed Fouad Alkhatib, Palestinian political analyst, X.com, November 9, 2026.**
- **"The terrorist group did not show any concern for the civilian lives that would be lost when the tower eventually collapses on its own, because it wants dead Palestinians and news of tragedy to keep Gaza in the news cycle and to gain global sympathy, hoping for more incoming resources and donations for the**

Strip's humanitarian and reconstruction needs that it could siphon. Additionally, Hamas has also been accused of obstructing construction projects intended to create safer communities for displaced Gazans in southern Gaza, prioritizing political control over humanitarian relief." — Ahmed Fouad Alkhatib, X.com, November 9, 2026.

- **Hamas had also used equipment necessary for civilian life for military purposes. A video published by Hamas's own media outlets shows Hamas operatives dismantling water and sewage pipes in the Gaza Strip to use in manufacturing rockets to fire at Israel.**

Why is Microsoft's outage lasting so long and will emails be lost?

– BBC - Tom Gerken, Technology reporter, Laura Cress, Technology reporter, and Cachella Smith

A major Microsoft outage has impacted schools, healthcare systems, businesses, courts and governments around the world.

Services including Teams, Outlook and AI software Copilot, are being restored almost 24 hours since issues first surfaced.

Microsoft said the outage was not a cyber-security incident and was caused by a technical issue. It has apologised for the disruption.

Here's what we know about the services affected and what went wrong.

What happened?

Some Microsoft 365 services have been affected by "connectivity problems" with problems reported in at least 74 countries.

From late on Thursday, customers reported varying levels of access - many were unable to send or receive emails, view certain files or details on their calendar apps.

But some users were able to use Teams, messaging and online meeting functions without issues.

As of Friday afternoon, Microsoft said it had seen "encouraging recovery progress" in Europe and improvement in North America.

The company added that it was focused on "addressing the remaining areas of disruption" but warned "some users may still experience intermittent issues".

In a later statement, the company said it was continuing to see improvements "with email queues significantly reduced and approaching normal levels".

The company attributed the ongoing outage to an issue during an earlier network capacity upgrade.

"We have addressed the underlying issue and continue to restore service to remaining customers and regions," it said on Friday.

Will emails affected by the outage ever arrive?

Although services are beginning to resume, Microsoft has warned of continued "intermittent access issues", meaning some users will still struggle to load their inboxes and could experience "delayed email delivery".

In other words, it is not quite safe to assume every email you send is going to arrive in its intended recipient's inbox right away.

Earlier, Microsoft said it would be extending the "timeout window" to 48 hours "to help protect delayed messages as delivery catches up".

The email timeout window refers to the amount of time Outlook will wait to receive an email.

When they do show up, the timestamp will be when they were delivered rather than when they were sent.

Why has it taken so long to fix?

Although email service Outlook appears to be resuming, the outage has so far lasted for more than 20 hours - in outage terms that is considered a long time.

Prof James Ferryman from the University of Reading's department of computer science said the details the company has disclosed provide some clues.

"What Microsoft has told us is that the part of its servers that sets up secure connections is getting swamped, and once that happens the server just stops answering," he said.

"The trouble is that this kind of failure snowballs.

"One server falls over, its work gets passed to the next one, and meanwhile huge numbers of phones and laptops keep trying to get back in.

"You can't just turn it all back on at once. You have to bring it back bit by bit."

The challenge is therefore not just fixing the fault, but managing the huge surge of devices trying to reconnect once services start coming back online.

==========
